Pest & Proofing Services

Pest Control Services

- Rodents
- Insects
- Bed Bugs
- Wasps and Bees
- Ants
- Cockroaches
- Squirrels
- Moths
- Textile Pests
- Stored Product Insects
- Foxes
- Fly Control and Fly Units
- CCTV Drain Surveys

Bird Management Services

- All Pest Birds
- Pigeons
- Gulls
- All Bird Proofing Options
- Deterrent Spikes
- Post and Wire
- Avian Netting
- Electronic Deterrent Systems
- Trapping Programmes
- Audible Deterrent Systems
- Hawking & Raptor Services
- Drone Surveys

Pest Proofing Services

- Internal Proofing
- External Proofing
- Surveys & Reporting
- Sealing Entry Points
- Door Sweeps
- Pipes and Drain Repair
- Weather Stripping
- Wire Mesh Installs
- Rodent Proofing
- Bird Proofing
- Fly Screen Doors & Windows

Cleaning & Waste Removal

Cleaning Services

- Daily Premises Cleaning
- Window & High Level Cleaning
- Reactive Post-mortem
- Biohazard Cleaning
- Estate Management
- End Of Tenancy Cleaning
- Washroom & Kitchen Deep Cleaning
- Washroom Services
- Janitorial Supplies

Waste Removal Services

- Full Clearance
- Junk Removal
- Loft Clearance
- Rubbish Removal
- Rubbish Clearance

Waste Management Services

- Waste Separation Education
- Recycling Guidance
- Internal Bin Provision
- External Bin Provision
- Client Toolbox Talks

Integrated Pest Management

What is IPM?

Integrated Pest Management is a combined approach to solving pest issues, by collecting all available evidence and information, in order to produce a control programme that delivers maximum efficiency, with minimal impact on the location and environment. It not only looks at the initial infestation but should look forward in order to assist preventing it from occurring again.

Integrated Pest Management is not just about applying an insecticide or laying rodenticide to kill a pest. We consider non-chemical, biological and cultural methods as well as looking at the broader issues such as customer education, habitat modification, monitoring and physical methods.

Our procedures are based on treating clients/general public with respect and in the manner they want to be treated through the demonstration of our willing approach as experts. This is achieved by showing our clients that we take responsibility and care about them.

Integrated Hygiene Solutions

Looking to meet the ever-changing needs of our clients, we have identified a gap in the FM industry to develop a combined training module that encompasses the 3 vital elements of Pest Prevention, Cleaning, Waste Management to provide clients with an evolving educational tool for their on-site employees.

2023 saw the successful implementation of a new Integrated Hygiene Solution (IHS) training, that can be provided to on-site operatives to further enhance their skillset and benefiting not only the end user but the building and grounds alike.

Our IHS has been introduced to not only educate existing operatives but also to encourage and enable potential vulnerable candidates back into independent work. Working with trusted charitable partners and recruitment pathways, to provide candidates from diverse backgrounds we are also providing enormous social value to our clients assisting in the fight against homelessness, mental health, equality and diversity.

Participants will be trained to work with a combined maintain and prevent thought process, looking to identify issues before they begin.

This Integrated Hygiene Solution has not only been developed to upskill operatives but is a cost efficiency for any client underpinned with relevant social value.

What Are The 3 Modules of IHS?

The training has 3 vital modules to educate and provide clarity around effective hygiene in the workplace. The ideology of (IHS) centres around the concept of a Hygiene Operative that can independently identify, highlight, assist and support these essential services:
