Integrated Pest Management

What is IPM?

Integrated Pest Management is a combined approach to solving pest issues, by collecting all available evidence and information, in order to produce a control programme that delivers maximum efficiency, with minimal impact on the location and environment. It not only looks at the initial infestation but should look forward in order to assist preventing it from occurring again.

Integrated Pest Management is not just about applying an insecticide or laying rodenticide to kill a pest. We consider non-chemical, biological and cultural methods as well as looking at the broader issues such as customer education, habitat modification, monitoring and physical methods.

Our procedures are based on treating clients/general public with respect and in the manner they want to be treated through the demonstration of our willing approach as experts. This is achieved by showing our clients that we take responsibility and care about them.

Integrated Hygiene Solutions

What Are The 3 Modules of IHS?

The training has 3 vital modules to educate and provide clarity around effective hygiene in the workplace.

The ideology of (IHS) centres around the concept of a Hygiene Operative that can independently identify, highlight, assist and support these essential services:

- Identification of possible onsite pest activity, early warning signs, proactive communication, and reactive pest measures.
- Understanding of cleaning operations health & safety, COSHH, safe use & care of equipment & cleaning store housekeeping.
- Waste stream identification, separation, recycling efficiency, contamination prevention & client education.

Canine Treatment

Ark are now offering treatments utilising specially trained detection dogs for fast, efficient rodent detection with minimal disruption. Ideal for any environment, including high-sensitivity areas like retail and restaurants, this method swiftly identifies infestations, reducing downtime and preventing revenue loss where traditional traps may fall short.

Non-Toxic & Eco-Friendly: An organic solution that avoids harmful chemicals

Quick & Efficient: Dogs can identify rodents faster than trapping methods

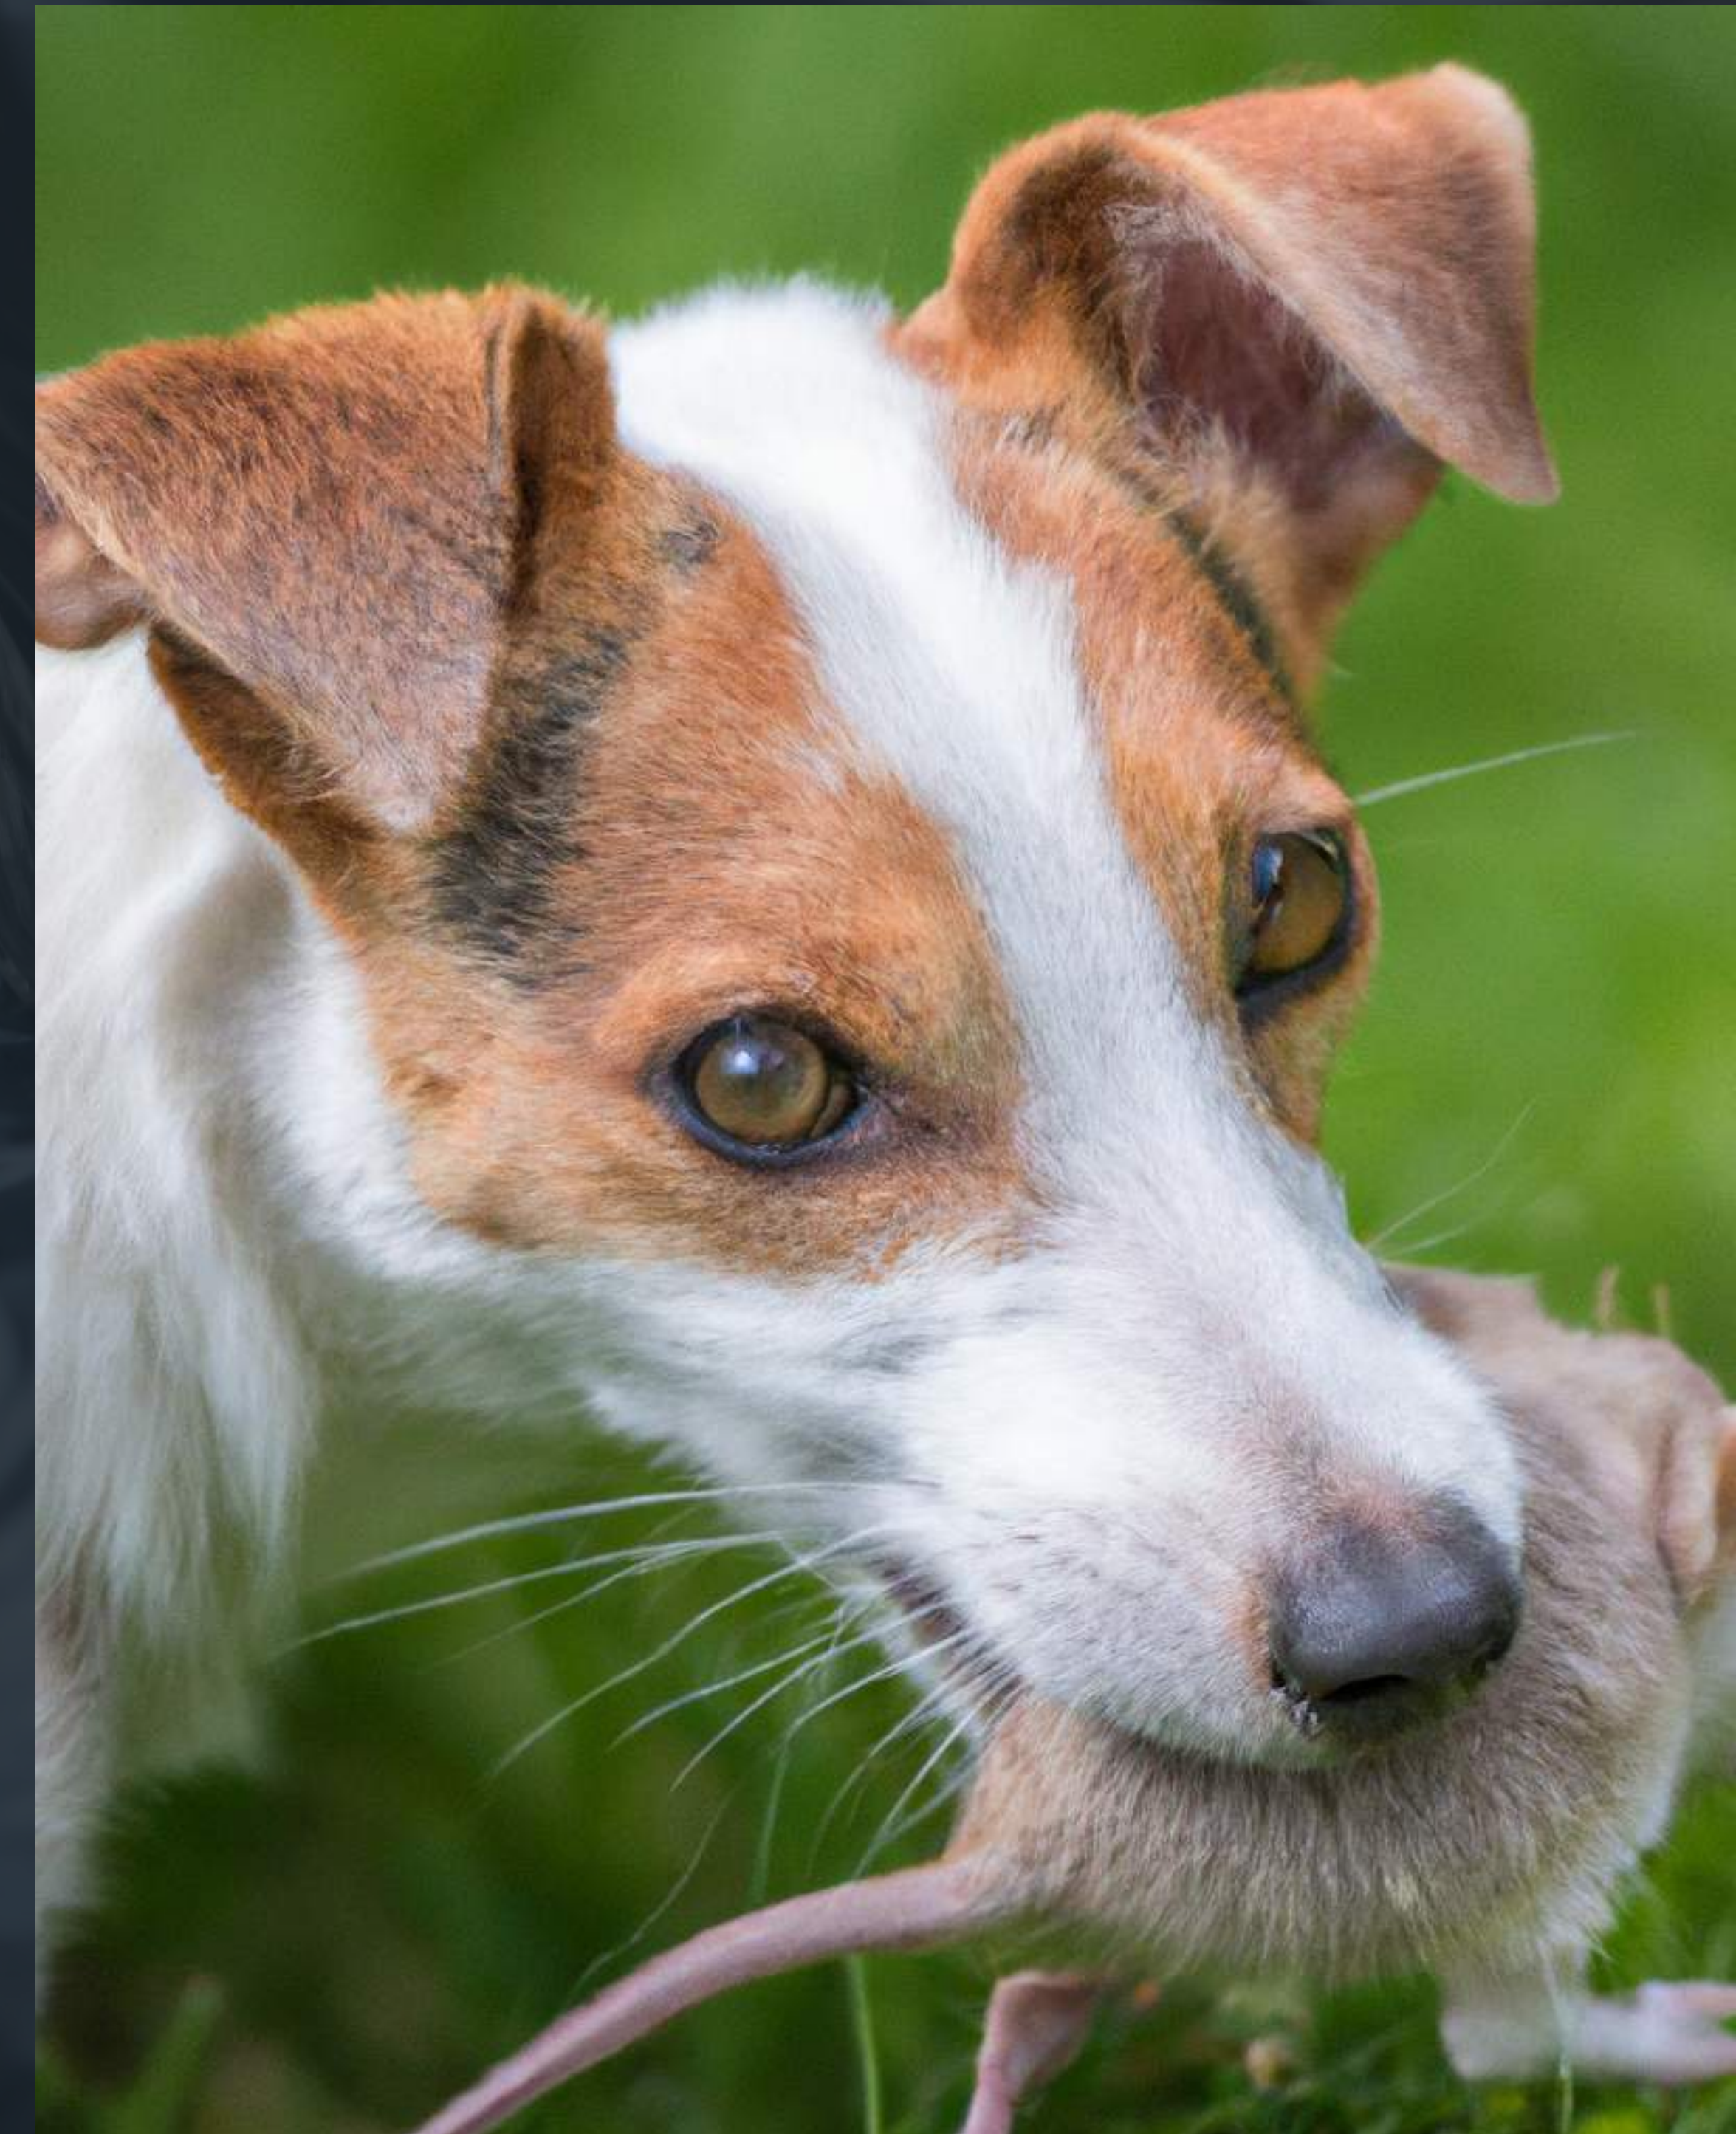

Thorough Inspection: Using their superior sense of smell, the dogs quickly check the entire premises

Humane Solution: Ensures quick and ethical dispatch of rodents

Turnaround: Reduces the need for prolonged closures

Targeted Proofing: Dogs can pinpoint entry points, aiding in future prevention strategies

Versatile: Suitable across various environments.

Woodworm Treatment

BENEFITS OF USING PARASITIC WASPS TO TREAT FURNITURE BEETLE:

- Eco-Friendly and Chemical Free: Offers a natural, non-invasive solution that eliminates the need for harmful chemicals, preserving the integrity of the infested item or building structure while safeguarding the environment and human health.
- Flexible Treatment: Parasitic wasps can be introduced directly to the infested object, eliminating the need for relocation and allowing treatment to occur on-site.
- Targeted Control: Specifically targets woodworm larvae, minimising the impact on non-target species and ecosystems.
- Safe: Harmless to humans and pets, making it suitable for use in homes, museums, historic buildings, and other sensitive environments.
- Sustainable: Provides long-term control by establishing a self-sustaining population of parasitic wasps.
- Economic: Avoids the need for disruption, closure or vacating property during treatment.

APPLICATION AREAS:

- Religious Buildings: Ideal for churches, cathedrals, and other historic structures.
- Heritage and Conservation: Ideal for historic buildings, museum pieces and artifacts where chemical treatments could cause damage or alter authenticity.
- Furniture and Antiques: Preserves valuable antique furniture and wooden artifacts by preventing woodworm damage without causing any adverse effects on the items.
- Forestry and Timber: Ensures the health of harvested timber and wooden products by controlling wood-boring beetle populations

PowerShield System

The PowerShield System is an environmentally friendly advanced pest management and prevention solution, designed to create a protective 'shield' around your property. This advanced technology creates an electronic barrier that effectively deters rodents from crossing it. With a focus on high-risk areas, such as doorways and loading bays, this sustainable system employs a multi-layered approach to effectively guard against rodents.

- Proactive strategy: Supports our 'prevention over cure' approach to rodent control.
- Comprehensive protection: Offers complete protection for high-risk areas prone to rodent ingress.
- Innovative technology: Features a unique PowerShield box, patented by PELIAS, allowing voltage and frequency adjustments.
- Non-toxic and eco-friendly: Reduces the need for harmful chemicals.
- Tailored solutions: Provides multiple options for optimal outcomes, including Rail, Mat, and Curtain.
- Safe application: Designed to be safe for humans, pets and vehicles to cross the rail

The PowerShield rail is seamlessly integrated into the warehouse floor, ensuring it remains flush to the ground to eliminate trip hazards and allow safe passage for vehicles

Key safety features include:

- Low-Energy Electronic Pulse.
- Localised Effect, the pulse is confined to the point of contact.
- Safe for Everyday Use in commercial and industrial environments.
- Non-Toxic & Environmentally Friendly.
- No Risk of Entanglement or Entrapment.
- Safe for Pacemakers.

Auto Laser Ultimate MK2 Laser Bird Deterrents

Why Use Laser Bird Deterrents?

- Highly Effective, Proven & Well Documented.
- Birds see them as a threat, encouraging them to flee without harm.
- Non-Intrusive & Eco-Friendly
- Lasers work without noise, ensuring peaceful environment
- Successfully deters most bird species.

Why the MK2

- Easily programmed via Android & iOS App
- High-Quality Laser - Class 3B
- 400m Estimated Coverage Distance
- -90, +90 Degree Tilt Range
- 360° Pan Range
- 240 Presets Per Zone
- Service every 10k hours / 24 months
- 3 different run modes

Advantages of Laser Bird Deterrents

- Reduces cleaning, building upkeep, and labour expenses.
- Maintain adherence to health, safety, and environmental regulations.
- Improve health and safety for staff and customers.
- Ensure facilities operate at peak capacity with minimal disruptions.
- Minimise noise, contamination, and damage caused by birds.
- Lower expenses and maximise operational efficiency for increased profitability.
- Promotes ethical deterrence methods and a cleaner, professional environment for improved public perception.
- Safeguard buildings, equipment, and critical infrastructure from bird-related damage.
- Reduces bird damage and replaces netting or shooting with better cost efficiency.

Bird Alert Master 2.0

BirdAlert® is an intelligent system that identifies specific bird species by their sounds using a specialized microphone. Detecting gulls, corvids, geese, and starlings up to 250 meters away, it activates connected scare products to target unwanted birds. The system includes a detection box and microphone, with external scare tools and a speaker for optimal performance.

- **Global Connectivity:** Automatically adjusts to local mobile networks for seamless operation worldwide—no manual setup needed.
- **Wireless Integration:** Connects effortlessly to external scare tools like scareman, creating a comprehensive bird control system.
- **Durable, Weatherproof Plugs:** Equipped with Weipu SA12 connectors for enhanced durability, sealing, and resistance to harsh conditions.
- **Energy Efficient:** Lower power consumption extends battery life, reducing costs and environmental impact.
- **Eco Friendly:** Environmentally friendly packaging & made from 100% recycled plastic.
- **Latest Connector Technology:** Weipu SA12 plugs provide superior connectivity and durability, built to withstand harsh weather and rough handling - ideal for outdoor use. Their excellent sealing protects it from water and dust, ensuring long-lasting reliability and effectiveness in bird control.

TrapMe Fenrir

Tired of unnecessary inspections and ineffective pest control? With TrapMe® Fenrir™, you get a modern, smart solution that combines advanced technology with ease of use.

Effective Monitoring: TrapMe Fenrir automatically reports online whether a catch has occurred or not. This saves time, reduces transportation costs, and optimizes your workday.

Robust Design: Built for both indoor and outdoor use – whether it's snow, rain, or 50-degree heat. Its IP67 sealing ensures reliability in all environments.

Easy Management: Gain full control with the user-friendly administration portal. Monitor traps live 24/7, receive instant alerts, and manage data easily from your computer, tablet, or smartphone.

TrapMe Fenrir is built for indoor and outdoor use – and has been designed to meet the demands of the tough environments rats and mice thrive in. Dust and dirt, heavy rain, snow, or strong sunshine -25 °C, +50 °C – IP67. Bring it on!

The easy-access online portal; Camro Systems works on a laptop, tablet, or smartphone. The portal provides complete control, regardless of whether there is one trap or a thousand traps through report module and instant alarm messages.

TrapMe Fenrir “roams” to connect to the best signal available (which is a part of the IoT connectivity plan) and all traps have a built in eSIM.

TrapMe Fenrir runs on replaceable batteries which have a minimum 3-year life expectancy under normal circumstances.
